CALIBRATION

Valid To: September 30, 2025

Certificate Number: 1550.01

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following calibrations<sup>1,9</sup>:

I. Chemical

Parameter/Equipment	Range	CMC <sup>2,4</sup> (±)	Comments
pH Meter <sup>3</sup> –  pH  Electrical Simulation of pH Indicator	4 pH 7 pH 10 pH  (414 to -414) mV	0.051 pH 0.029 pH 0.053 pH  0.32 mV	Standard pH solutions  DMM

- <sup>1</sup> This laboratory offers commercial calibration service and field calibration service.
- <sup>2</sup> Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of  $k = 2$ . The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.
- <sup>3</sup> Field calibration service is available for this calibration. Please note the actual measurement uncertainties achievable on a customer's site can normally be expected to be larger than the Calibration and Measurement Capability Uncertainty (CMC) found on the A2LA Scope. Allowance must be made for aspects such as the environment at the place of calibration and for other possible adverse effects such as those caused by transportation of the calibration equipment. The usual allowance for the uncertainty introduced by the item being calibrated, (e.g. resolution) must also be considered and this, on its own, could result in the actual measurement uncertainty achievable on a customer's site being larger than the CMC.
- <sup>4</sup> For the parameter Dissolved Oxygen, DO represents "Dissolved Oxygen" and for the parameter Turbidity, NTU represents Nephelometric Turbidity Units.
- <sup>5</sup> For the parameters Analytical and Precision Balances, Scales and Moisture Analyzers and Moisture Balances,  $R$  represents the numerical value of the resolution of the device.
- <sup>6</sup> English/Avoirdupois Mass values will be determined using accepted international conversion factors.
- <sup>7</sup> CMC uncertainties based on total immersion thermometers.
- <sup>8</sup> The type of instrument or material being calibrated is defined by the parameter. This indicates the laboratory is capable of calibrating instruments that measure or generate the values in the ranges indicated for the listed measurement parameter.
- <sup>9</sup> This scope meets A2LA's *P112 Flexible Scope Policy*.

## Calibration

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 *General requirements for the competence of testing and calibration laboratories*. This laboratory also meets the requirements of ANSI/NCSL Z540-1-1994 and R205 – Specific Requirements: Calibration Laboratory Accreditation Program. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated April 2017).
